                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to human lysine-rich statherin protein (LRSP)(AAY94526). The CDNA sequence encoding this protein was identified through analysis of a cDNA library of breast tumour tissue (BRSTNOT14). The LRSP sequence was found to have homology with the DNA of human statherin (the present sequence) and human basic histidine-rich protein (AAY94520). Human statherin is a phosphoprotein that acts as an inhibitor of precipitation of calcium phosphate salts in the oral cavity. The LRSP polypeptide and its antagonists may be useful for treating or preventing disorders associated with the activity of LRSP. Such allergies, asthma, diabetes mellitus), bacterial and fungal infection and cancers (such as leukemia, adenocarcinoma, melanoma). Antibodies to LRSP may be useful for diagnosis of the above disorders.

antithlamatic, hypotensia, current and antiviral; antithlamatic; antithlamatory; antibacterial; antiviral; antifungal; antirheumatic; antithlyroid; and antibacterial; antiviral; antifungal; antirheumatic; the presence of or predisposition to, or preventing or treating conditions associated with an ORFX-associated disorder. The protein acids can be used to express ORFX proteins in gene therapy coercors. The proteins and nucleic acids may be used to treat cancers, proliferative disorders, neurodegenerative disorders, osteoarthritis, complete to the proteins in gene therapy craft vs host disease, cardiovascular disease, diabetes mellitus, chippertension, hypothyroidism, cholesterol ester storage, systemic lupus corythematosus, severe combined immunodeficiency (SCID), AIDS, viral, concernal or fungal infection, malaria, autoimmune disorders, astima, concernal haemoglobinuria, antiinflammatory disease; to enhance concurration; to inhibit thrombosis; and as a contraceptive.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   AAC74446 to AAC77606 encode the proteins given in AAB40237 to AAB43397, which represent the human ORFX open reading frames 1 to 3161. The ORFX sequences have activities such as: cytostatic; hepatotropic; vulnerary; antipsoriatic; antiparkinsonian; nootropic; neuroprotective; osteopathic; anticonvulsant; antiarthritic; immunosuppressant; immunostimulant; cardiant; thrombolytic; coagulant; vasotropic; antidiabetic; hypotensive; dermatological; immunosuppressive;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   31-MAR-1999;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      CC therapy and in vaccines. The sESTs are useful as probes for the CC therapy and in vaccines. The sESTs are useful as probes for the CC identification and isolation of full-length cDNAs and genomic DNA CC molecules which correspond to the sESTs. Proteins encoded by the sESTs CC are useful in assays for determining biological activity and raising CC antibodies. They may be useful for treatment of autoimmune disorders (CC (multiple sclerosis, insulin dependent diabetes), allergic conditions CC (asthma), myeloid or lymphoid cell deficiencies, wounds, burns, ulcers, CC (asthma), myeloid or lymphoid cell deficiencies, wounds, burns, ulcers, CC (Alzheimer's, Parkinson's, Huntington's disease, stroke), coagulation CC (Alzheimer's, Parkinson's, Huntington's disease, stroke), coagulation clisorders (haemophilia, thrombosis), inflammatory disorders (CC observations), and comparison and c

The polynucleotides and polypeptides are useful in gene therapy, vaccines or peptide therapy. The polypeptides have various cytokine-like activities, e.g. stem cell growth factor activity, haematopoiesis regulating activity, tissue growth factor activity, haematopoiesis regulating activity, indundant of cancer, leukaemia, nervous system disorders, arthritis and treatment of cancer, leukaemia, nervous system disorders, arthritis and

These were derived from expressed sequence tags (ESTs) from the organism of interest. They can be used in diagnostics, forensics, gene mapping, identification of mutations, to assess biodiversity and for nutritional purposes. The present sequence is a cDNA
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     AAA48965 standard; DNA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          (LRSP)(ANY94526). The CDNA sequence encoding this protein was identified through analysis of a CDNA library of breast tumour tissue (BRSTNO714). The LRSP sequence was found to have homology with human statherin protein (ANY94527) and human basic histidine-rich protein (the present sequence). Human statherin is a phosphorotein that acts as an inhibitor of precipitation of calcium phosphate salts in the oral cavity. The LRSP polypeptide and its antagonists may be useful for treating or preventing disorders associated with the activity of LRSP. Such disorders include autoimmune/inflammatory disorders (for example AIDS, allergies, asthma, diabetes mellitus), bacterial and fungal infection and cancers (such as leukemia, adenocarcinoma, melanoma). Antibodies to LRSP may be useful
                                                                                                                                                                                                                                                                                                                                                                                                                 AAT24320 standard;
                                                                                                                                                                                                                                                                   22-SEP-1996 (first entry).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Sequence 491 BP; 151 A; 90 C; 87 G; 163 T; 0 other;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Purified polypeptide used for treating or preventing a disorder characterized by expression or activity of lysine-rich statherin
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        The present invention

                                                                                                                                                                                                                                                                                                                               RESULT 9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  double-stranded DNA (or its complementary strand or the corresp. Couble-stranded DNA) which comprises one of the 7837 "GS" sequences given in AART19001-T26837 and which is able to hybridise to part of human genomic DNA, cubA or mRNA is claimed. The GS (Gene Signature) Sequences were obtained from 3'-directed cDNA libraries prepared from various human tissues; synthesis of cDNA was initiated from the 3'-end of mRNA by using poly(7) as the sole primer. Since the 3'-all the 3'-oriented cDNAs hybridise with specific mRNAs pecies, almost all the 3'-oriented cDNAs hybridise with specific mRNAs. Each library is constructed so as to reflect accurately the relative abundance of different mRNAs in the particular tissue from which it was derived. The appearance frequency of a given GS in a cDNA library can be determined (esp. using primers and probes derived from the GS sequences) as a means of diagnosing abnormal cell function or for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Matches

                                                                                                                                                                                                                                                                                                                                                                 RESULT 10
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             A single-stranded DNA (or its complementary strand or the corresp. CC double-stranded DNA) which comprises one of the 7837 "GS" sequences G1ven in AAT19001-T26837 and which is able to hybridise to part of CC human genomic DNA, CDNA or mRNA is claimed. The GS (Gene Signature) CC sequences were obtained from 3' directed cDNA libraries prepared CC from various human tissues; synthesis of CDNA was initiated from the CC 3'-end of mRNA by using poly(T) as the sole primer. Since the 3'-CC untranslated sequence is unique to a particular mRNA species, almost CC all the 3' oriented cDNAs hybridise with specific mRNAs. Each library CC is constructed so as to reflect accurately the relative abundance of CC different mRNAs in the particular tissue from which it was derived. CC The appearance frequency of a given GS in a cDNA library can be CC determined (esp. using primers and probes derived from the GS sequences) as a means of diagnosing abnormal cell function or for vy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Matches

The nucleic acids are used to allocate patients for specific therapy for HIV infection, Bloom syndrome, cardiopathy, aging, neurodegenerative disorders, Herpes simplex virus infection, renal ischaemia, amyotrophic lateral sclerosis, solid tumours and cancers. This nucleotide sequence represents a chemically treated apoptosis gene. Even SEQ ID numbers are the complementary DNA strands to the odd SEQ ID numbers. The sequence data for this patent is not represented in the printed specification but is based on information supplied by the European patent office.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             the genome, which encodes one or more messenger RNA splice variants.

CC The oligonucleotide libraries are useful for detecting mRNAs from a biological sample, in expression profiling studies, in qualitatively or quantitatively characterising the corresponding transcriptome, and in CC detecting RNA transcripts and splice variants of human or animal CC transcriptomes. The libraries may also be used as specialised mini CC libraries to detect transcripts of a sub-transcriptome under a cc particular biological or pathological state, and so allowing the CC condition of tissue- and pathological state, and so allowing the CC condition; to detect developmental specific genes such as those genes condition; to detect developmental specific genes; and to detect RNA CC condition; to detect developmental specific genes; and to detect RNA CC condition; to detect developmental specific genes; and to detect RNA CC condition; to detect developmental specific genes; and to detect RNA CC condition; to detect developmental specific genes; and to detect RNA CC condition; to detect developmental specific genes; and to detect the particular disorder. ABN27253 to ABN59589 represent conducted sequences from rats, humans and mice, which are used in CC specification, but was obtained in electronic format directly from WIPO at firm with family shaded and securions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Matches

                       Chemically modified sequences of genes associated with apoptosis are useful to determine methylation patterns of genomic DNA samples for diagnosis of associated diseases such as cancer
                                                                                                                   WPI; 2002-017444/02

The nucleic acids are used to allocate patients for specific therapy for HIV infection, Bloom syndrome, cardiopathy, aging, neurodegenerative disorders, Herpes simplex virus infection, renal ischaemia, amyotrophic lateral sclerosis, solid tumours and cancers. This nucleotide sequence represents a chemically treated apoptosis gene. Even SEQ ID numbers are the complementary DNA strands to the odd SEQ ID numbers. The sequence data for this page of the complementary DNA strands to the odd SEQ ID numbers.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human 1mmune system associated gene SEQ ID NO: 999
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ABL33026 standard; DNA; 6056 BP.

                                                                                                                                                                                                                                                                                                                                                                                        AAS46787 standard; DNA; 61020 BP
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   The present invention provides a number of human immune system associated genes which are modified by the methylation of cytosines. The sequences can be used in the disgnosis and treatment of immune system disorders, including eye diseases such as retinopathy, neovascular glaucoma and macular degeneration, arteriosclerosis, anaemia, cancer, acute myeloid leukaemia, Alzheimer's disease, AIDS, epilepsy, neurofibromatosis, rheumatoid arthiitis, psoriasis and inflammatory/ulcerative bowel
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 6056 BP; 1780 A; 54 C; 1079 G; 3143 T; 0 other;

                                                                                                                                                                                                                                                        밁
                                                                                                                                                                                                                                                                                               Ş
                                                                                                                                                                                                                                                                                                                                           밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    CC bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with CC bisulphite, of genes associated with tumour suppression and CC oncogenes having a sequence taken from 536 (actually 533 since CC numbers 408, 458 and 500 are missing from the sequence listing) sequences CC (SS) and sequences complementary to (SS). The nucleic acid may be a CC peptide nucleic acid-oligomer (PNA) of at least 9 nucleotides and may CC form part of a set of probes for detecting the cytosine methylation state CC array for analysing diseases associated with CPG dinucleotides e.g. CC cancers and tumours. The probes can also be used in a method for CC ascertaining genetic and/or epigenetic parameters for the diagnosis and contained of the compared to another set of genetic and/or epigenetic parameters for the diagnosis of the parameters which CC differences serving as basis for diagnosis and/or prognosis events which CC are disadvantageous to patients. The present sequence is one of the CC annonness.

Sequence 1, Application US/09234827B Patent No. 6448471

GENERAL INFORMATION:

APPLICANT: Puzio, Piotr S.
APPLICANT: Grundler, Florian M.W.
TITLE OF INVENTION: Nematode feeding structure specific gene and its

```
GENERAL INFORMATION.

APPLICANT: Grimes, et al.

TITLE OF INVENTION: Sucrose binding proteins
FILE REFERENCE: 4630-50206

CURRENT APPLICATION NUMBER: US/09/424,283

CURRENT FILING DATE: 1999-11-19
PRIOR APPLICATION NUMBER: PCT/US98/10465

PRIOR FILING DATE: 1998-05-21

PRIOR FILING DATE: US 60/047,568

Following HAP purification, this DNA was used as tracer in a subtractive hybridization reaction. The driver was PCR-amplified cDNAs from pools of 5,000 clones made from the same 3 libraries. The pools consisted of I.M.A.G.B. clones 260232-265223, 340488-345479, and 484488-489479.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 pregnant uterus"

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                /note-"Vector: psport1; Site_1: Sal1; Site_2: Not1; RNA
was prepared from a pool of 6 anonymous Wilms' tumor RNAs.
RNA was prepared by acid-phenol, followed by one round of
oligo dT selection. CDNA library preparation was with
oligo-dT NotI primer for first strand system. An
oligo-dT NotI primer for first strand synthesis generated
gcggccc(t)n at the 3' end of the clones. A 5' Sal1
adaptor was used with sequence 5' gtcgacccacgcgtccg-3'.
Resulting cDNAs were size selected (average size 2 kb),
NotI digsated, and ligated into NotI/Sal1-cut psport1.
Library was constructed by Dr. Manfred Gessler."
